

CLiKAPAD®

prioritizer®

*Enhance audience experience by involvement -
prioritize, reorder, categorize,
make multiple choices in one vote,
give fractional answers as well as all
the standard ARS Voting features!*

The CLiKAPAD *prioritizer* packs so much flexibility!

The pillow embossed luminescent (glow in the dark) tactile membrane is great for low-light situations. The embossing provides sensory feedback increasing accuracy and increasing user confidence.

"GlowKey" lights the active keys and increases visibility of the text, enhancing user feedback.

The CLiKAPAD *prioritizer* features CLiKtext™, allowing in-meeting texting to engage the audience in real-time population of lists of ideas, risks, improvements and much more, e.g. one simple added value at a conference could be to ask the audience to text in their email address.

The CLiKAPAD *prioritizer* has the latest screen technology, delivering bright clear text and lots more information than previously available on ARS keypads, including LCD displays.

****REMOTE PARTICIPATION is achievable using the in-built micro-USB connector to attach the REMOTE CLiKAPAD *prioritizer* to a meeting being hosted elsewhere in the world.**

RE-ORDER LIST / *prioritize*, a UNIQUE feature offering the opportunity to reorder a list of statements or ideas by using the cursor navigation keys and the select button circled in RED: e.g. say the request from the facilitator was "Pick your top 5 from 15 items". The list would be sent to the CLiKAPAD *prioritizer* and the users select their #1 by using the arrow keys to move up and down and then 5 (red key) to select then the next and so on until complete and then use the tick (10 key) to send!

Shown Actual Size
52.8mm x 84.2 x 7.7

CLiKAPAD *prioritizer*®

Standard ARS features: -

- ▶ 0 to 10 keys for voting (11 options)
- ▶ 0 can be used for abstain
